

Signage

Signs are an important element of commercial/mixed-use corridors and play an important role in establishing the visual character of a place. They are vital components for many businesses because they serve as the primary identification tool for an establishment. However, a sign that has a cluttered look will undermine the character of the building and overall street appearance, while clean, attractive, and aesthetically pleasing signage can give a unique identity to the street and contribute to the overall visual appeal of the area. The design guidelines may address sign types, repetition, placement, sizes, lighting, colors, and materials.

Introduction

Introduction

The Open Space and Recreation Element considers open space and recreational facilities within the City's jurisdiction, both of which help exemplify the unique Rolling Hills Estates rural character and way of life. This element serves as a management guide for preserving, maintaining, and expanding both open space and recreational facilities.

Purpose

The purpose of the Open Space and Recreation Element is to preserve open space areas within the City and provide adequate active and passive recreational areas and facilities to serve its residents and visitors. Open space areas must be preserved to protect the rural character of the City. Additionally, recreational uses are closely intertwined with public health and safety and must also be protected. Thus, the Open Space and Recreation Element plans to properly manage and expand open space areas and recreational facilities. Open space includes wildlife habitat, natural drainages, agricultural land, groundwater recharge areas, mineral deposits, trails, parks, and utility easements. Open space may also include hazard areas, such as earthquake fault zones, unstable soils, floodplains, and watersheds. Recreation space includes parks and trails.

This Open Space and Recreation Element satisfies the requirements of State planning law and is a mandated component of the General Plan. Government Code Section 65302(e) establishes the required components of an open space element, which includes the preservation of natural resources and outdoor recreation and open space maintained for public health and safety.

Relationship to Other General Plan Elements

The Open Space and Recreation Element policies are designed to protect and manage open space resources and recreational facilities. The Open Space and Recreation Element is most closely related to the Conservation Element, as there is a significant overlap between the provision of open space and recreational facilities and the provision of natural resources preservation and conservation. Areas designated as open space are often established due to identified natural resources that warrant preservation. However, a key consideration in the Open Space and Recreation Element is the provision of active and passive recreational space, including trail and bike facilities. In comparison, the Conservation Element focuses strictly on the preservation of natural resources (primarily biological and cultural).

Concurrently, the Land Use Element establishes a land use pattern that considers the need for open space and recreational facilities and designates parcels to fulfill this purpose. Goals and policies in the Land Use Element consider environmental conditions (such as natural resources that warrant preservation) and the open space/recreational needs of residents. Adequate land use planning is required to ensure the provision of a sufficient ratio of open space and recreational facilities per City resident. Thus, the Land Use Element is closely related to the Open Space and Recreation Element.

The Open Space and Recreation Element includes goals and policies that relate to the existing and future trail and bikeway system. This topical area overlaps with the Mobility Element, as

trails and bikeways provide means of alternative transportation throughout the City. The Open Space and Recreation Element focuses on the use of trails and bikeways strictly for recreational purposes. In contrast, the Mobility Element includes goals and policies that cover transportation facility provision more comprehensively.

The policies in the Open Space and Recreation Element are related to the Safety Element. Some designated open space areas are also documented as earthquake fault zones, unstable soils or slope zones, floodplains, or watersheds. Development within these areas would be inconsistent with the goals and policies in the Safety Element.

Chapter Organization

This Open Space and Recreation Element chapter comprises four sections:

Introduction summarizes the general intent of the Open Space and Recreation Element as well as its relationship to other General Plan elements.

Existing Conditions describes existing parks and recreation facilities (including trails) and access to those facilities.

Proposed Facilities documents new park projects as well as the vision for increasing parks and recreational areas in the City.

Goals, Policies, and Implementation Measures identifies open space and recreational needs, maintenance, and mobility-related goals and policies.

Existing Conditions

Existing Conditions

This section of the Open Space and Recreation Element provides an inventory of existing parks, open space areas, trails, and recreational facilities. It also evaluates access to parks and recreation throughout the City.

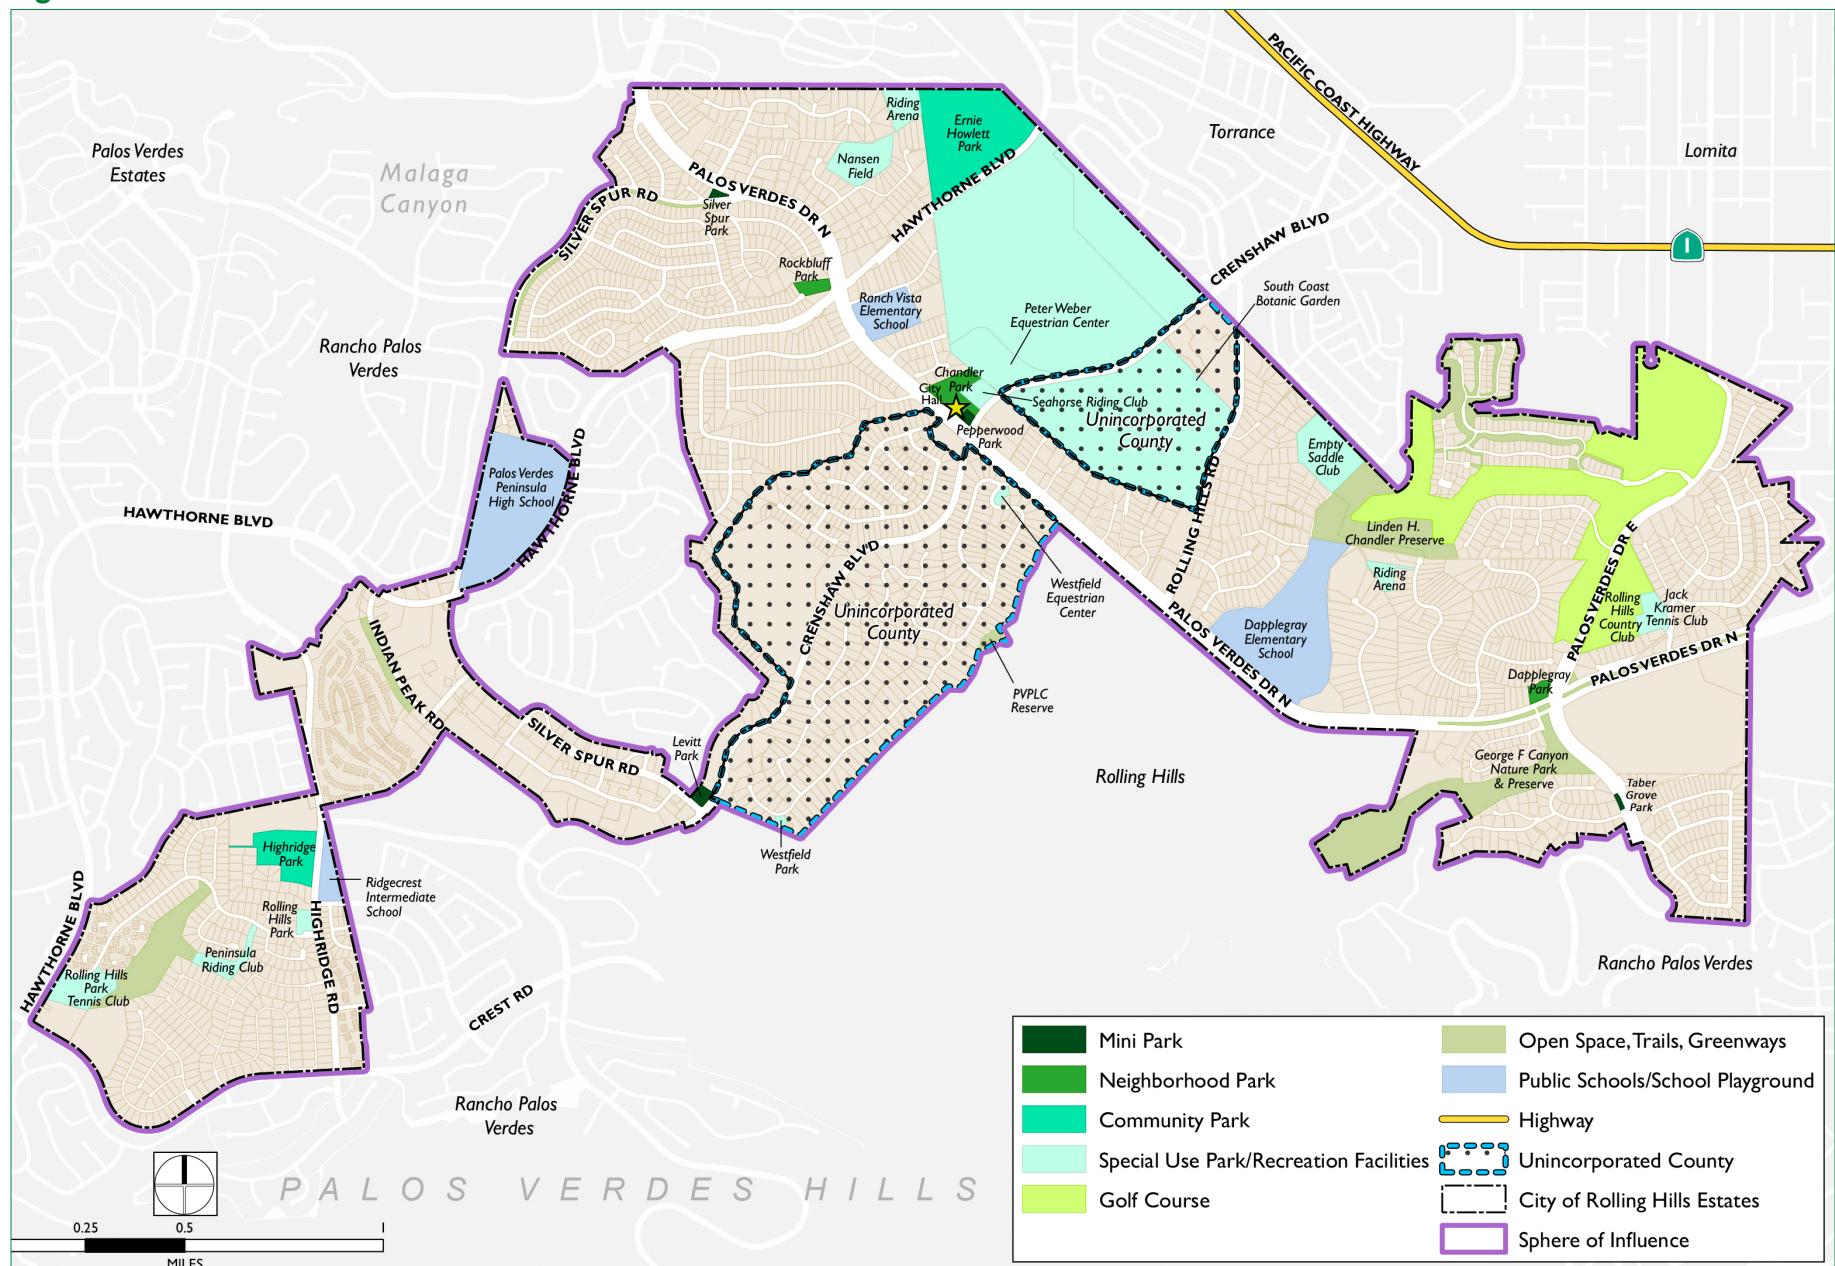

Parks, Recreation, Trails, and Open Space

Currently, 20.5 percent of the City's land area is dedicated to open space, parks, and recreation. Five percent of the City's land is dedicated to parks and recreation. The City's parks and recreation facilities are shown in **Figure 6-1** and detailed in **Table 6-1**.

There are currently two public open spaces and eight parks in the City. The eight parks are broken down into three categories: mini, neighborhood, and community. These categories, described as follows, vary in size and provision of amenities:

- **Mini-parks** are typically located near high-density development and are less than an acre in size.
- **Neighborhood parks** range from one to five acres and provide passive and active uses.
- **Community parks** are greater than five acres in size and provide athletic fields and equestrian amenities.

The City has one mini-park, five neighborhood parks, and two community parks. Funded by a Los Angeles County Regional Park and Open Space Grant, Ernie Howlett Park was renovated in 2018 to add exercise stations and improve pathways. City parks, open spaces, trails, and recreational facilities are maintained by a combined effort of the City's Maintenance Division and contractual services, including landscaping, janitorial, and electric services.

Table 6-1 City of Rolling Hills Estates Parks, Open Space, and Recreational Facilities

Name	Category	Amenities	Acres
Parks			
Ernie Howlett Park	Community	Four handball courts, athletic fields, basketball court, sand volleyball court, picnic tables, barbecue pits, playground equipment, running track, bicycle path, tennis court, equestrian center	34.4
Highridge Park	Community	Two regulation-sized soccer fields, youth softball/baseball field, barbecue pits, restrooms, picnic tables, playground equipment, running track, multi-use trail	10.7
Chandler Park	Neighborhood	Equestrian ring, open space	3.5
Dapplegray Park	Neighborhood	Riding ring, lunging ring, dressage area	1.5
Rockbluff Park	Neighborhood	Playground equipment	1.7
Levitt Park	Neighborhood	Open field	1.1
Silver Spur Park	Neighborhood	Open grass field	1.0
Pepperwood Park	Mini	Lunging ring, trails, landscaped area	0.5
Taber Grove Park	Mini	Open field	0.4
Subtotal			54.8
Open Space, Trails and Greenway			
Linden H. Chandler Preserve	Open Space, Trails, and Greenways	Open space trails for horseback riding and hiking	26.6
George F. Canyon Nature Center and Stein/Hale Nature Trail	Open Space, Trails, and Greenways	Open space, nature center, trails	33.3
Other open space and greenways throughout the City	Open Space, Trails, and Greenways	Open space, undevelopable land, greenways, trails	43.6
Subtotal			103.5
Recreation Facilities			
Peter Weber Equestrian Center	Special Use Park/ Recreation Facilities	150 horse boarding units, offices, three riding arenas, two lunging rings, training courses, petting zoo	171.8

Source: LA County GIS Data, 2019; City of Rolling Hills Estates, 2021

The City has two designated public open spaces and various other open spaces and greenways throughout the City, also listed in **Table 6-1**. Open space refers to unimproved land or water set aside to preserve natural resources, public health, and safety concerns. Uses in open spaces in the City include hiking trails, equestrian trails, and greenways. In addition, the City owns the Peter Weber Equestrian Center that offers access to trails, horse boarding facilities, arenas and features a petting zoo. The center also offers summer camps and other training activities. The City also has a joint-use agreement with the Palos Verdes Peninsula Unified School District, allowing City residents to use the Palos Verdes Peninsula High School swimming pool during the summer.

The Los Angeles Countywide Comprehensive Park & Recreation Needs Assessment in 2017 evaluated the amenity quality and condition of six City parks: Chandler Park and City Hall, Dapplegray Park, Ernie Howlett Park, George F. Canyon Nature Center, Highridge Park, and Rockbluff Park. The parks and amenities were ranked on a scale of “good,” “fair,” or “poor” based on their conditions. All amenities in all six parks were classified as “good” in the analysis.^[1]

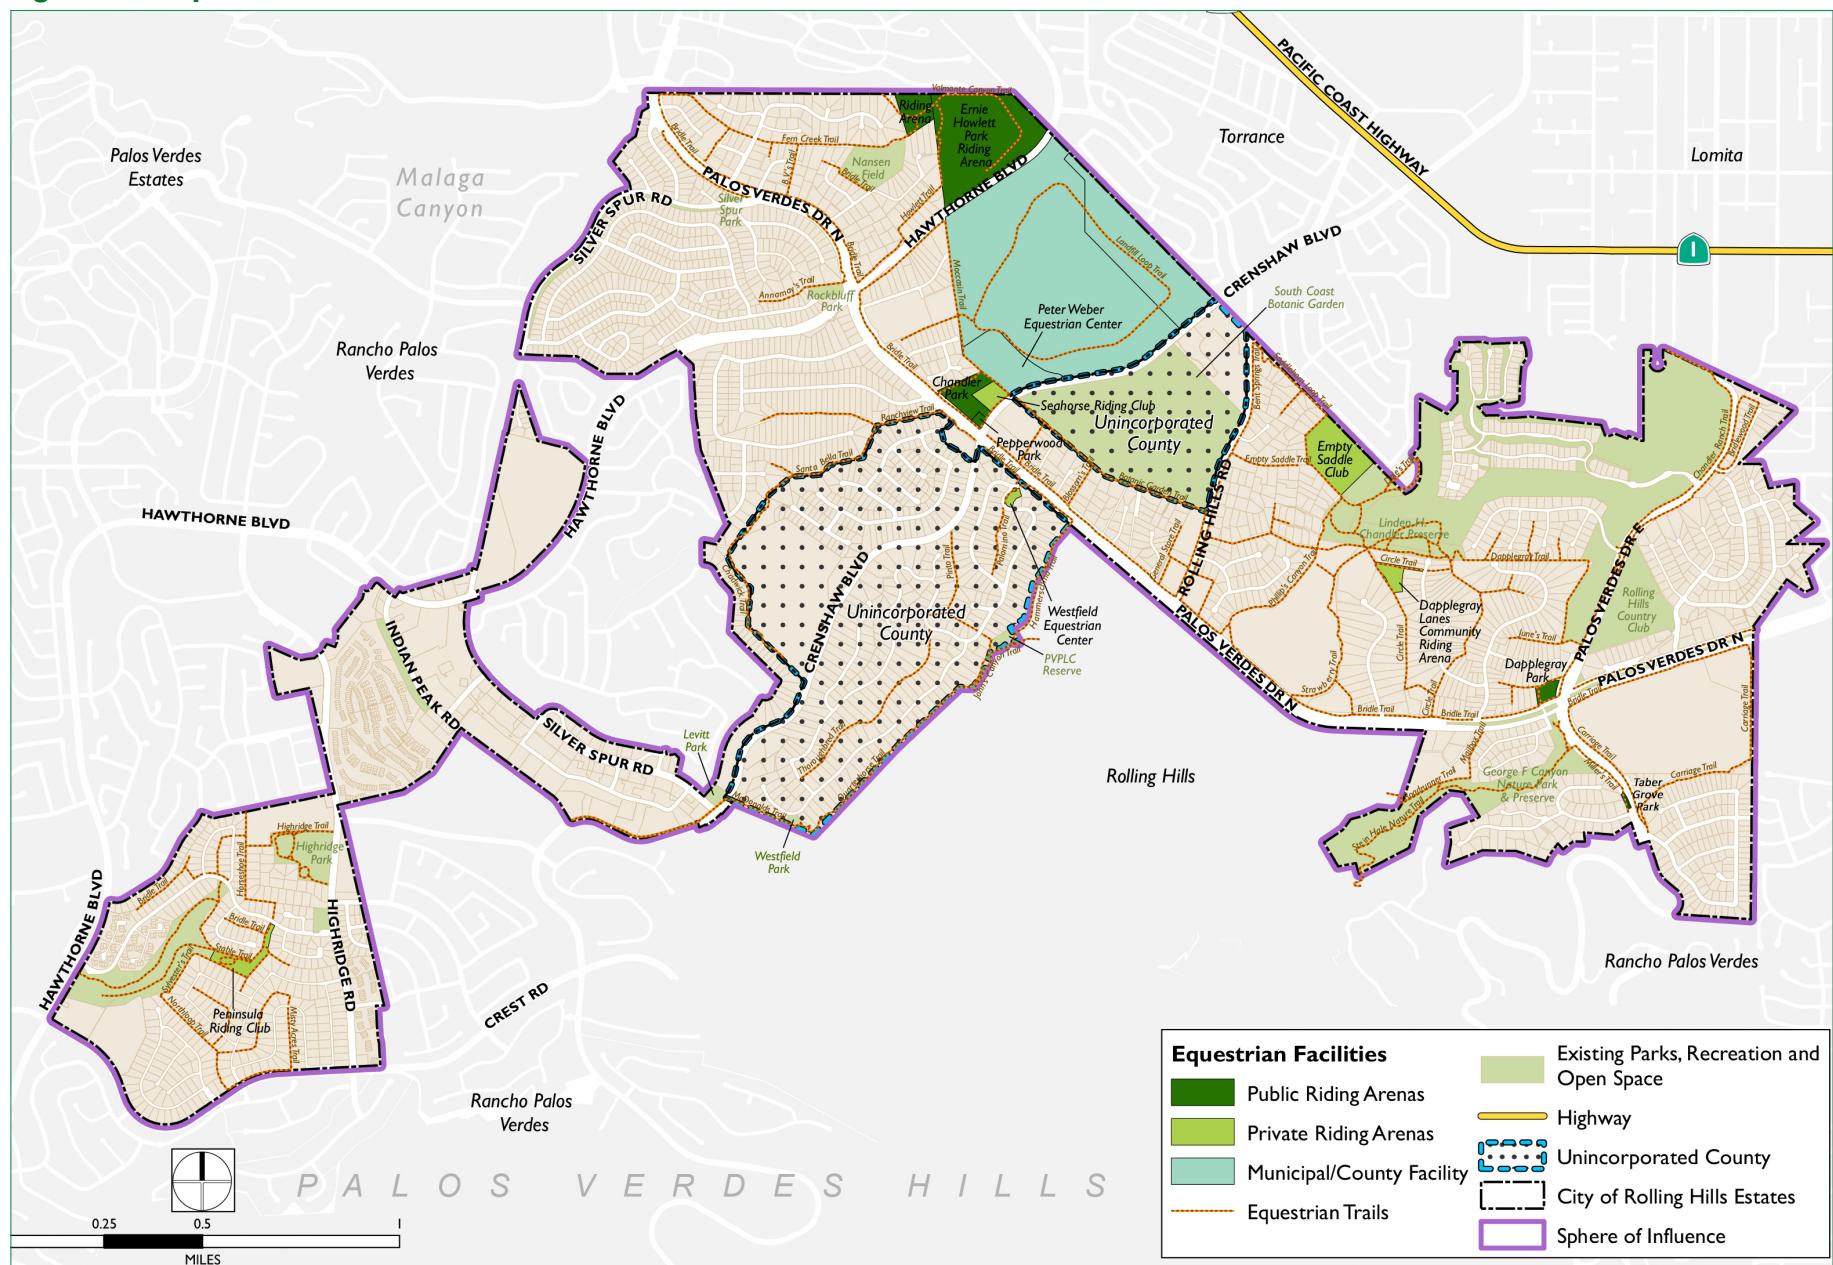

The City of Rolling Hills Estates has over 25 miles of bridle trails, most of which are approximately 10 feet wide and lined with three-railed fences. This trail network is displayed in **Figure 6-2**. The existing equestrian trail network provides access to most of the parks in the community and links together riding clubs, parks, and private residences.

In addition to public facilities, there are also several private and Los Angeles County-owned parks and open spaces in the City

and the sphere of influence, amounting to a total of 303.1 acres. These are displayed in **Table 6-2**. Private recreation opportunities complement the publicly owned facilities for some segments of the population. The private recreation areas in the City include six equestrian facilities, two tennis clubs, one golf course and one community center. There is an additional private equestrian facility and tennis court within the City’s sphere of influence. In addition, there is one Los Angeles County-owned park in the City and one in its sphere of influence, South Coast Park and South Coast Botanic Garden, respectively.

Access to Parks and Recreation

Analyzing a community's access to parks and recreation can help understand existing conditions and identify areas of the City that are underserved by existing parks and recreation facilities. The City has 53 acres of park space for its population of approximately 8,000, giving it a ratio of 6.63 park acres per 1,000 residents. In comparison, according to the 2017 LA Countywide Comprehensive Park & Recreation Needs Assessment, Los Angeles County provides 3.3 park acres per 1,000 residents on average.^[2] However, according to the National Recreation and Park Association's 2021 Agency Performance review, a typical park and recreation agency in the U.S. serving fewer than 20,000 residents has 12.4 acres of parkland per 1,000 residents.^[3]

One metric utilized to evaluate access to parks and recreation is examining how many residents have access to parks within a 10-minute walk of the park or facility. **Figure 6-3** displays access to parks and recreation facilities in the City using a 10-minute walkshed. **Figure 6-4** shows two parks outside of the City boundaries, Hesse Park and Vista Del Norte Reserve, and their 10-minute walksheds. While not in the City itself, these two parks still provide recreation opportunities to City residents and help meet the needs of nearby residents.

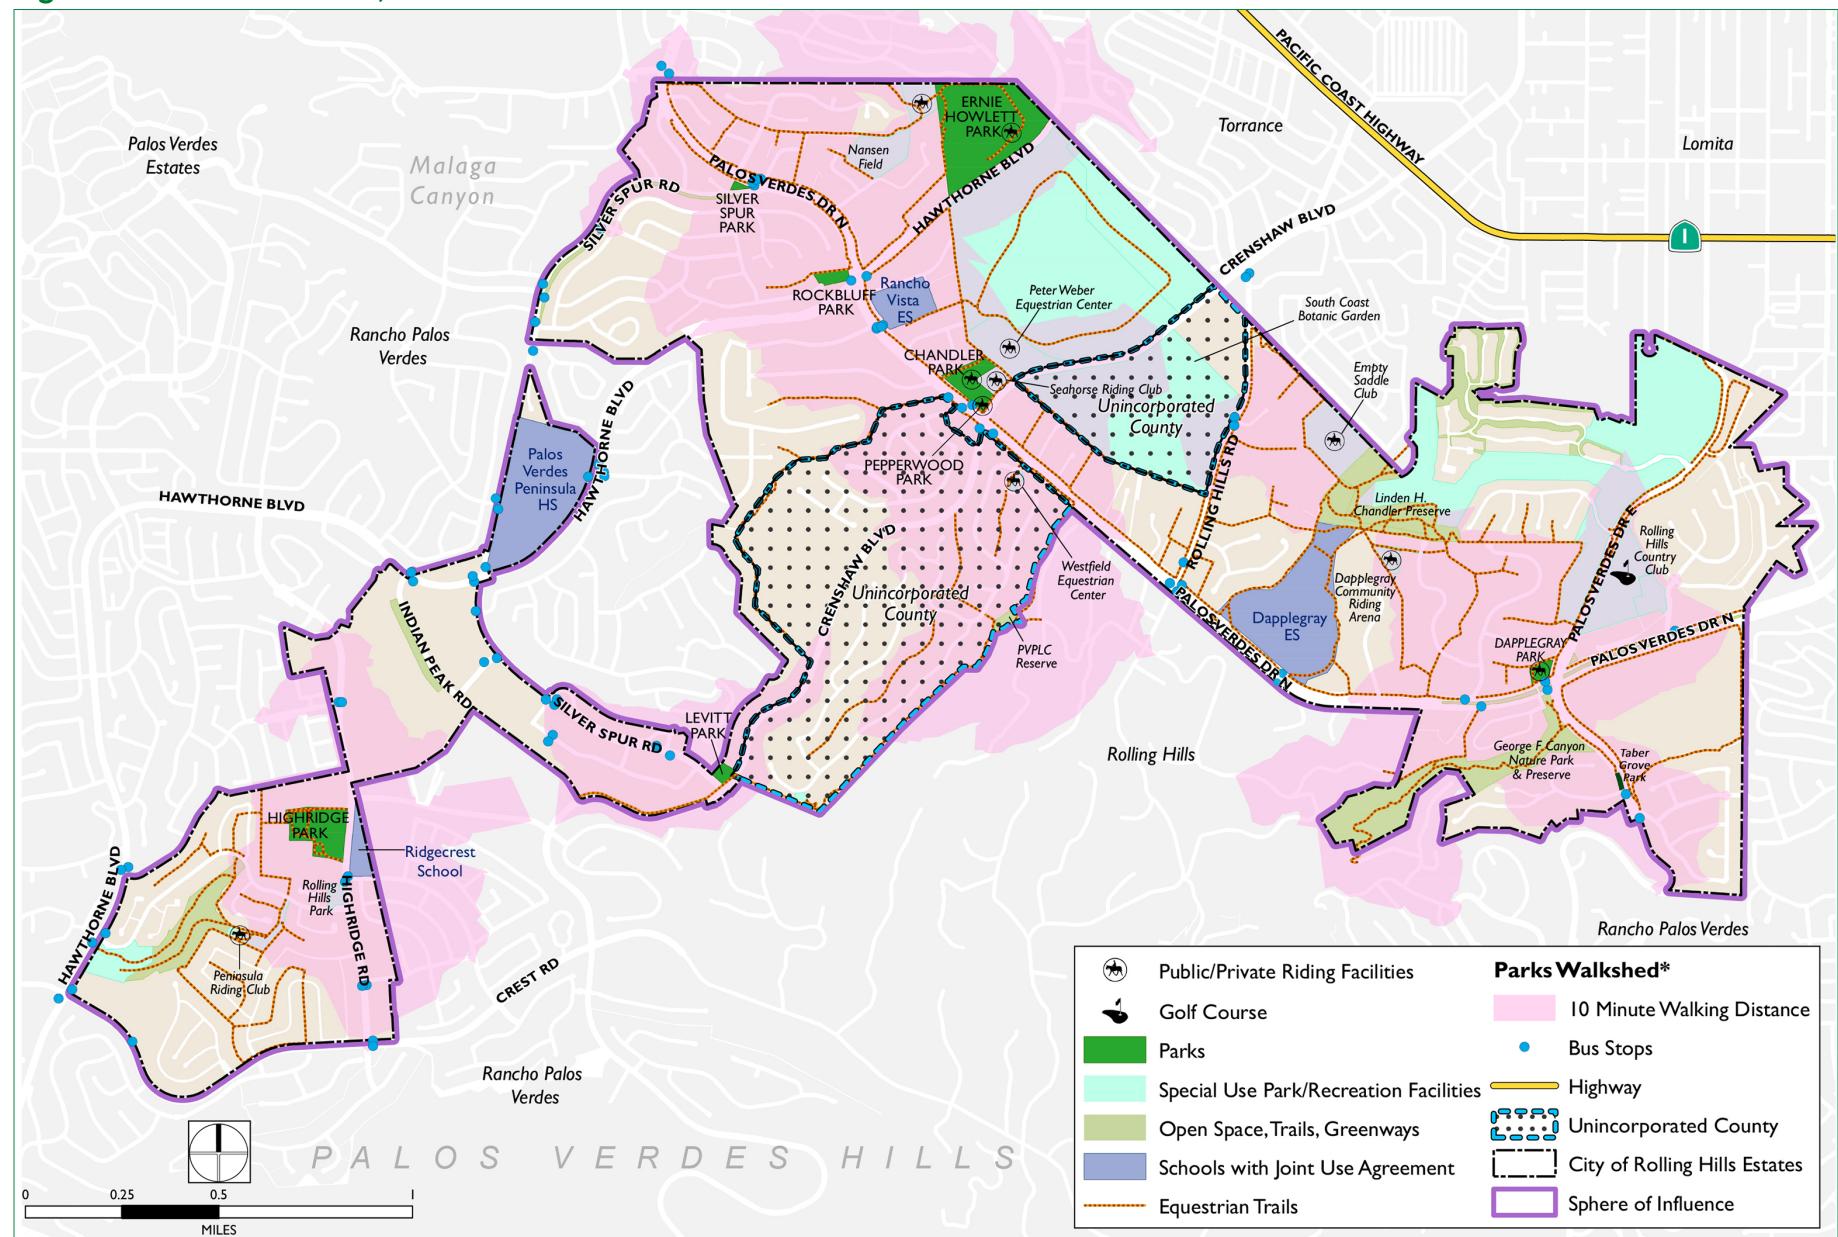

The nonprofit Trust for Public Land provides data on park access for each jurisdiction throughout the nation, with the goal of ensuring there is a park within a 10-minute walk of every household. The Trust for Public Land creates a 10-minute walk service area using a national walkable road network dataset and identifying physical barriers such as highways, train tracks, rivers, and bridges to ensure routes are walkable. According to the Park Score provided by The Trust for Public Land,^[4] 68 percent of Rolling Hills Estates residents live within a 10-minute walk of a park. This is slightly higher than the national average of 55 percent.
